The Hampton Grain Roller Mill

Geoff Hampton Engineering has been making roller mills for over 10 years.

The Hampton Grain Roller Mill has been designed to be safe and easy to operate, and is built to last with rollers formulated from cast iron.

Designed to roll barley and wheat, the Hampton Grain Roller Mill produces a large particle size once it has gone through the rollers, giving it a large surface area for ease of digestion.

Minerals can be added easily using the large side hopper. The Mill is powered using a 15 hp electric motor, and comes with feet that can be bolted down for stability.

The Hampton Grain Roller Mill has been "Built to last" and is based upon research and feedback from South Island farmers... like you.

Technical Specifications

The 2011 Hampton Grain Roller Mill has been fitted with a cam-belt instead of chain driven.

- No more oil or greasing required.
- More horse power, runs quieter, less vibration.
- These roller mills can also be run with a chain

Product Info

The Hampton Grain Roller Mill has been built locally and designed for NZ conditions. These machines produce a better sample than other Grain Roller Mills currently available in NZ.

The Hampton Grain Roller Mill is available in two sizes:
Smaller - produces 2.5-3.5 T/hr*
Larger - produces 4.5-5.0 T/hr*

"We are actively seeking approved distributors across New Zealand who can support sales, installation and servicing of the Hampton Grain Roller Mill. Contact us today to express your interest"

" I personally guarantee that our Grain Roller Mill will give you excellent results and I am proud to stand by this "

The Hampton Grain Roller Mill

We are actively growing our New Zealand network of approved distributors, installers and service agents. All of this is designed to make it easier for our customers to acquire and get the best possible output from their hampton Grain Roller Mill.

Purchase

In the first instance, please contact our Head Office on 03 324 2800 and we will put you in touch with your nearest approved distributor.

Installation

In the majority of cases, your Hampton Grain Roller Mill will be a key part of a total feed system and installation will be carried out by your supplier. If you need our assistance with installation or have any questions, again, please contact our Head Office.

Servicing

Our Grain Roller Mill is renowned for being robust and easy to maintain. However, we strongly recommend regular servicing by our trained and accredited service agents and the use of approved replacement parts where required.

Again, if you need a service agent or have any questions please call us on 03 324 2800 or email geofham@xtra.co.nz

7 Reasons to use the Hampton Grain Roller Mill

- Feeding cows on rolled grains is more effective for digestion over hammer mill methods
- Rollers fabricated from specially formulated cast iron which are longer lasting
- Easily adjusted roller tension with large tension springs
- Sturdy and built to last
- Large side hopper to enable minerals to be added with ease
- All moving parts can be oiled and greased with ease, safe and easy to operate and maintain
- Parts on hand immediately if needed - less down time

The Hampton Grain Roller Mill

Why Use the Hampton Grain Roller Mill

"Effective supplementary feeding of concentrates is critical to the success of dairy farms"

Feeding Concentrates: Supplements for Dairy Cows, R Kellaway, T. Harrington

Cows have a limited ability to chew small cereal grain, with apparent digestibility of 14.4% for whole grain and 93% for rolled grain.

The Hampton Roller Mill rolls the grain to a high standard, producing a large surface area for ease of digestion. If the grain is not rolled sufficiently or is hammer milled a large portion will pass through undigested.

What Farmers Say....

"I installed Geoff Hampton's Grain Roller Mill about five years ago having tried two other Mills.

This mill has produced approximately 675 ton of grain per season, rolling four ton per hour depending on the grain sample. I haven't had to alter the adjustment or tension on the rollers between or after startup and Geoff has provided great back up service when I have needed it.

Our farm nutritionist is impressed with the quality of the grain sample produced.

If you would like to talk to me about my results with the Geoff Hampton Roller Mill, call Brendon on 03 302 0802."

Brendon Dolan,
Farmer,
Dorie, Rakaia
